Experience

REX Exchange Inc. - Sr. Software Engineer

Software Engineer working in **Javascript**, **Python**, and **Java**. Engineer #5 and second Full Stack Engineer to help build and scale both the internal and external customer applications, for multiple sites and teams. Responsibilities include architecture for all UI development, and helping to grow and lead the Customer Experience team. In addition to development, was also responsible for educating other team members on the latest trends and teachings for UI development,

particularly for JavaScript.

Major Projects included:

- Migrating the main website (www.rexhomes.com) from AngularJS to React, to improve site performance and development
- Introduce Testing Frameworks Jest and Cypress.io to increase feature reliability and reduce downtimes
- Developing a UI component library to share code between our multiple sites, and projects
- Help build and maintain the Mobile Application using React Native
- Build new backend MicroServices in Python to help support Customer Experience projects
- Launch new customer tools such as the [User Dashboard](#) (requires login)
- Implement Standards and Automation Tools for the team to help increase development productivity, such as JavaScript Linters, formatters, and release automation.

DogVacay, Inc. - Sr. Front End Engineer

June 2015 - May 2017

A Front-End/Full Stack Engineer developing in **PHP**, **JavaScript**, **CSS/Sass**, and the **Backbone** library. Major projects included modernizing code base to **gulp** with **Browserify**, and **ES6** with **Babel**. Also, researched and implemented new front-end guidelines and best practices. Was main developer for rewriting and replacing the following core features:
